Introducing Prefabricated Wall Systems from Valcom

As a design-build firm, it is important for you to choose materials that have customization capabilities, are cost efficient, and will allow architects greater design freedom. Valcom's **PREFABRICATED WALL PANEL SYSTEMS** provide unique exterior finishes that are visually appealing and able to withstand variations in different weather conditions. In addition to greater design flexibility and single source responsibility, there are many benefits for choosing the prefabricated wall panel system.

Prefabricated Wall Panel System Advantages

- Thin and lightweight construction
- Ease and speed of erection and fabrication
- Factory quality control during prefabrication
- Wide variety of form and surfacing materials
- Excellent insulation value
- Adaptable for low and mid high-rise construction
- Easily applied interior finish
- Fire resistant and non-toxic
- Excellent performance in high seismic zones

Customization and Flexibility

When you consider Valcom's **PREFABRICATED WALL PANEL SYSTEMS**, just let your imagination be your guide. Regardless of what your current wall system is, our prefabricated wall panels can be easily adapted to fit your needs. If your design requires curved panels, we can manufacture them. If you are looking for even greater design flexibility, multiple finishes can be incorporated into one panel. Additionally, when Glass Fiber Reinforced Concrete (GFRC) panels are combined with the structural steel stud framing technology; color, form and texture specifications are virtually unlimited.

Unleash Your Creativity

With **PREFABRICATED WALL PANELS**, you have unlimited flexibility depending on the type of finish you choose. Just unleash your creativity. You can integrate any variety of different finishes; choose between marble, tile and brick, or Glass Fiber Reinforced Concrete, choose curved or straight claddings, or integrate both. Our wall panels consist of economical, marble, granite, stone, brick, tile and EIFS veneers that result in very lightweight panels which will reduce the structural load design of the building. In addition to giving you unlimited creativity; ceramic tile, stone, and thin brick clad pre-cast concrete panels combine durability and tremendous design flexibility with the strength and economy of pre-cast concrete.
